BHAVESH KUSAKIYA

Data Science & Analytics Professional

+91 8291247107 · bhaveshkusakiya04@gmail.com · Portfolio
GitHub · LinkedIn

Summary

Data Science and Analytics professional with experience in **Python, SQL, Power BI, Tableau, machine learning, ETL automation, and statistical analysis**. Built predictive models, automated reporting workflows, and interactive dashboards for business decision-making. Strong academic foundation in mathematics with hands-on work across customer churn, sentiment analysis, loan-risk prediction, and sales reporting.

Experience

Machine Learning Intern **Feb 2026 – Aug 2026**
SAIG *Remote*

- Designed and implemented **complex, federated data pipelines** on **Microsoft Azure** for a multi-domain intelligence system, integrating **Cosmos DB (Gremlin API)**, **Azure AI Search**, and **Semantic Kernel** into a unified knowledge architecture.
- Engineered a **tiered query-escalation pattern** across graph and vector retrieval layers, optimizing **Request Unit (RU) cost** while preserving query accuracy at scale.
- Built and maintained **native Azure cloud infrastructure** supporting real-time data ingestion and retrieval workflows across multiple interconnected pipelines.
- Authored technical documentation of the end-to-end architecture, covering system design, data flow, and cost-performance trade-offs for internal review.

ARCAP-REIT **Jul 2025 – Dec 2025**
Data Scientist *Remote*

- Analyzed, cleaned, transformed, and validated datasets using **Python, Pandas, and NumPy**; developed reusable scripts that improved the reliability of recurring analytical workflows.
- Created interactive **Power BI** dashboards with DAX calculations, slicers, and drill-through views to communicate KPIs, trends, and anomalies to technical and non-technical stakeholders.

Freelance **Aug 2024 – Feb 2025**
Data Scientist *Remote*

- Delivered analytics solutions for retail and logistics clients, including KPI dashboards, customer segmentation, and churn-prediction models using **Random Forest and K-Means**.
- Automated reporting workflows with **Pandas and Excel** for a logistics startup, reducing manual reporting work by **60%**.

Projects

Customer Churn Prediction Using Machine Learning **2025**

- Developed a customer churn prediction model using **Python** with **Logistic Regression, Random Forest, and XGBoost** to identify customers who were likely to discontinue services.
- Achieved **85% accuracy** by applying data preprocessing, feature engineering, hyperparameter tuning, and cross-validation techniques to improve model performance and generalization.
- Visualized the most important churn factors using **Tableau and Power BI**, enabling actionable insights for customer-retention strategies and targeted intervention campaigns.

Sentiment Analysis on Twitter Data **2025**

- Collected and preprocessed raw Twitter data by removing noise, special characters, URLs, duplicate content, and stopwords to prepare clean text for analysis.
- Implemented **Natural Language Processing (NLP)** techniques and trained **Logistic Regression and Naive Bayes** models for positive, negative, and neutral sentiment classification.
- Visualized sentiment distributions and trends using **Power BI and Seaborn**, delivering clear insights into public opinion and changes in audience perception.

Loan Risk Analyzer **2025**

- Built a classification model using **Logistic Regression and XGBoost** to predict the probability of loan default and support data-driven lending decisions.
- Preprocessed real-world loan data, handled missing values and inconsistent records, and performed feature engineering to improve the quality of model inputs.
- Achieved **89% accuracy** with an **AUC score of 0.91**; segmented high-risk applicants to support risk mitigation and more focused credit-review processes.

E-commerce Sales Forecasting Using Time Series Analysis **2025**

- Cleaned and analyzed historical e-commerce sales data to identify long-term trends, recurring seasonality, demand fluctuations, and unusual sales patterns.
- Applied **ARIMA and Prophet** time-series models to forecast future sales and support inventory planning, demand management, and business decision-making.
- Visualized historical performance and forecast results using **Power BI, Matplotlib, and Seaborn**; enhanced model accuracy through hyperparameter tuning and cross-validation.

Education

StarAgile **May 2023 – Apr 2024**
Certified Course in Data Science *Grade A*

Mithibai College **Jun 2021 – Apr 2023**
M.Sc. in Mathematics *Grade B+*

G. N. Khalsa College of Arts, Science and Commerce **Jun 2018 – Apr 2021**
B.Sc. in Mathematics *CGPA: 7.56*

Technical Skills

Programming: Python, R, SQL, JavaScript, HTML, CSS, JSON **Analytics:** Pandas, NumPy, ETL, Data Cleaning, Feature Engineering, A/B Testing
ML: scikit-learn, TensorFlow, PyTorch, Random Forest, XGBoost, K-Means, Cross-Validation **Visualization:** Power BI, Tableau, Matplotlib, Seaborn
Tools: Git, AWS, Docker, Flask, Streamlit, REST APIs, Jenkins, Google Colab

Certifications

Python for Data Science – IBM **2023**
- Gained hands-on experience with **Pandas, NumPy, and Matplotlib**; applied data wrangling, exploratory analysis, and visualization techniques to real-world datasets.

Machine Learning with Python – IBM **2023**
- Learned supervised and unsupervised machine-learning algorithms, including decision trees, K-Means clustering, and logistic regression; built and evaluated predictive models using **scikit-learn**.

Machine Learning with R – IBM **2024**
- Implemented classification and regression models in **R**, focusing on data preprocessing, model tuning, and visualization using packages such as **caret and ggplot2**.

Advanced Excel – Mithibai College **2022**
- Mastered advanced Excel functions and analysis tools, including pivot tables, VLOOKUP, conditional formatting, and structured-data management techniques.
